## PROJECTS

### Campus Resource Exchange Platform | [GitHub](#) | [Live](#) Mar'26

- Built a MERN-based platform for students to buy, sell, rent, and exchange academic resources, reducing costs by ~30%
  - Implemented JWT-based authentication to ensure secure user access and data handling
  - Integrated real-time chat using Socket.IO for seamless communication between users
  - Deployed the application on cloud platforms, ensuring accessibility and a scalable user experience
- Tech stack:** MongoDB, Express.js, React.js, Node.js, Socket.IO

### Video Converter Platform | [GitHub](#) Jan'26

- Designed a distributed, microservice-based media processing system deployed on AWS EKS
  - Implemented asynchronous, non-blocking job execution using RabbitMQ with retry and failure handling
  - Managed user authentication and metadata storage using PostgreSQL and MongoDB, with secure JWT-based APIs
  - Containerised and deployed services using Docker, Kubernetes, and Helm, with persistent storage via AWS EBS
- Tech stack:** AWS EKS, Kubernetes, Docker, Python, MongoDB, PostgreSQL

### Server Performance Monitoring and Reporting Tool | [GitHub](#) Dec'25

- Built a cross-platform monitoring tool tracking CPU, memory, disk usage, and processes across Linux, macOS, and Windows
  - Collected real-time system metrics using Bash and PowerShell scripts without third-party dependencies
  - Automated report generation using Python to produce readable performance summaries for system health analysis
  - Tested across all three platforms, ensuring consistent and accurate monitoring behaviour
- Tech stack:** Bash, PowerShell, Python, Linux Utilities
